

Product Details

Applications

Used for endoscope or creating a portal for subsequent surgical instrument placement into body cavity.

Product Features

1. Visual inserting guide monitors all tissue layers during the whole insertion process;
2. Blade free minimal invasion inserting tip prevents from damaging abdominal organs and abdominal blood vessels during insertion;
3. Bilateral tissue separators separate tissues instead of cutting them, which is more conducive to healing after surgery;
4. Integrated universal changeover head accommodates instruments with diameters ranging from 4.7mm to 12.9mm with a small dragging force;
5. Bilayer membrane seal design (upper five-flap spiral seal membrane and lower duckbill membrane) is easier to maintain pneumoperitoneum and durable to withstand at least 100 insertions;
6. Short cannula sleeve is convenient for instrument placement, which permits deeper effective instrument depth;
7. Funnel-shaped guide interface on changeover facilitates one-handed operation, needless to hold the cannula sleeve during surgical instrument replacement;
8. Inverted Christmas tree type threaded sleeve provides a strong fixing force for abdominal wall, which increases safety of surgery.

Specification

P/N	DIAMETER(mm)	CANNULA LENGTH (mm)
YCCA5-75	5	75
YCCA5-100	5	100
YCCA5-150	5	150
YCCA7-75	7	75
YCCA7-100	7	100
YCCA7-150	7	150
YCCA10-75	10	75
YCCA10-100	10	100
YCCA10-150	10	150
YCCA12-75	12	75
YCCA12-100	12	100
YCCA12-150	12	150
